

Fix your Apple Mac Mail

How to change your email settings

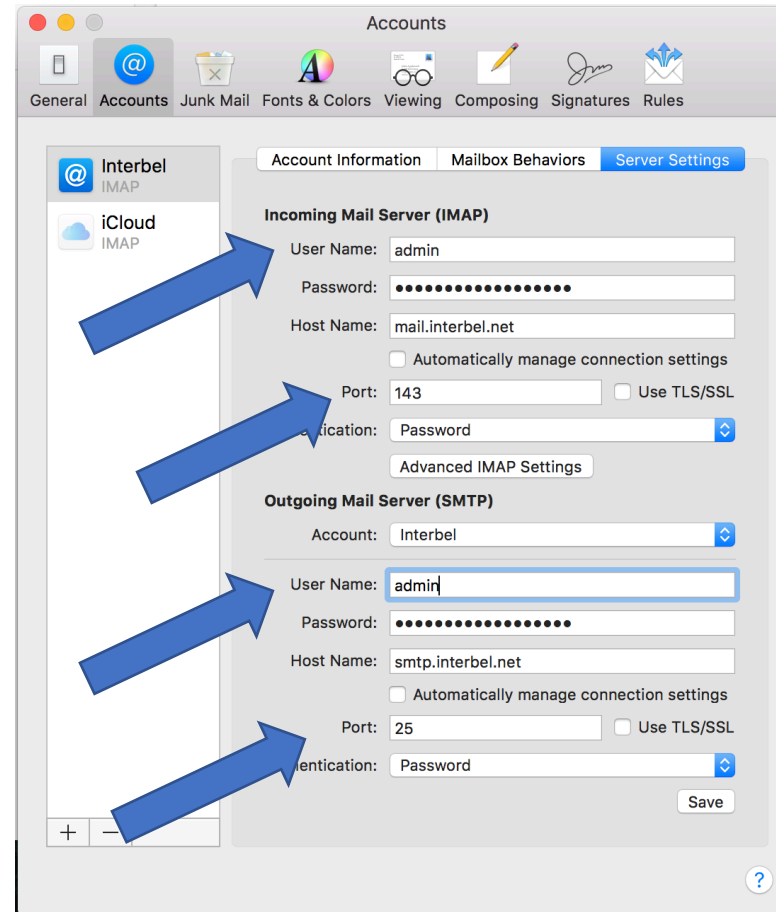

To get started, open your Apple Mail program. Then click on Mail and Preferences.

Click on accounts, select your InterBel email account.
This is how your email account should look now.

First off, lets make sure the Username for both incoming and outgoing email is your full email address such as user@interbel.net. We will also want to verify your POP3 or IMAP settings. The correct settings are on the next screen.

Server Settings

IMAP SECURE

server: imap.interbel.net / mail.interbel.net
port: 993
encryption: STARTTLS or SSL/TLS
auth: normal password (use full email and password)

OUTGOING SECURE (if client does not support STARTTLS)

server: smtp.interbel.net / mail.interbel.net
port: 465
encryption: SSL/TLS

POP3 SECURE

server: pop.interbel.net / mail.interbel.net
port: 995
encryption: STARTTLS or TLS
auth: normal password (use full email and password)

OUTGOING SECURE (if client supports STARTTLS)

server: smtp.interbel.net / mail.interbel.net
port: 587
encryption: STARTTLS (only)
auth: required, normal password (use full email and password)

Here is how a completed IMAP account would appear when properly configured. To complete your setup, save your settings and close this window.
